

mobile device management with IBM MaaS360

take control of your mobile assets

a fully integrated cloud platform to simplify device management

Advances in mobility have enabled businesses to become more productive as the number of employees working remotely increases, yet with this added flexibility, businesses can often feel that there is a loss of control.

Now you can take control of your business-critical data on company smartphones and tablets with our Device Management solution.

Our solution keeps users connected to their employees and in control of any sensitive information carried on staff mobile devices.

an industry leading solution

IBM MaaS360® is the fastest and most comprehensive way to configure devices for enterprise access and secure corporate data on smartphones and tablets — all from a single screen.

As a fully-integrated cloud platform, MaaS360 simplifies mobile device management (MDM) with rapid deployment, visibility and control that spans across mobile devices, applications and documents.

MaaS360 Mobile Device Management delivers robust management capabilities across all major computing platforms, including iOS, macOS, Android and Windows devices.

mdm essentials

- SMS, email or URL over-the-air (OTA) enrolment
- Passcode and encryption enforcement
- Email, VPN and Wi-Fi profiles
- Device restriction settings
- Remote locate, lock and wipe (full and selective)
- Jailbreak and root detection
- Policy updates and changes
- Compliance reporting
- Expense management

robust mobility management

- Email access controls
- Corporate directory integration
- Certificate management
- BYOD privacy settings
- Personal policies specific to users, not devices
- Automated compliance engine for near real-time actions
- Location tracking and geo-fencing
- Dashboards and alerts
